**API 1169:  
Certified Pipeline  
Construction Inspector**

**API 1169 Programme Scope**

API 1169 certification covers all aspects of the construction inspection of overland pipelines. It is about activities on the construction site, rather than manufacture of pipeline spools in the manufacturing works. This is one of the widest API Certification scopes involving not only technical information but safety, pollution control, US Federal regulations and environmental procedures. This is a very wide-ranging scope. **PLEASE CONTACT US** if you need further explanation of the BoK for this exam.

**API 1169  
Body of Knowledge (BoK)**

The diverse BoK includes codes from API, ASME, ANSI, CEPA/INGAA, ISO, CGA, OSHA and CFR (US Federal Regulations). More than 50% of the overall BoK content is non-technical and related to safety, environmental and anti-pollution procedures relevant to overland pipeline construction sites. Provision is made in the BoK for the use of US or Canadian regulations in answering exam questions.

**Examination details**

The API 1169 exam is computer-based comprising 100 closed book questions over 3 hours. Federal Regulations (US or Canadian as applicable) are available to candidates as PDFs on the test site's computers.

**Examination entry requirements**

API 1169 certification is intended specifically for overland pipeline construction inspectors rather than being a 'general' industry certification. Entry to the exam is based on an assessment of candidates' pipeline or other qualifying experience acquired over the past 20 years. Experience in non-pipeline subjects may be valid but needs to be of high technical quality to qualify.

**Examination application**

Application for registering as a candidate for the API 1169 exam is made through the API website [www.api.org](http://www.api.org). The cost is \$400US with \$300 renewal every 3 years. Once registered with API, exams are booked at one of the worldwide exam centres [www.prometric.com](http://www.prometric.com)
